IBC Stand 3.A48

DVEO Launches VGA to DVB-T Converter with MPEG-2 Encoder

VGA2DVB-T™ Delivers Computer Presentations to Multiple HD Television Monitors

San Diego, CA -- DVEO, the broadcast division of CMI, today announced the introduction of their new VGA to DVB-T converter. VGA2DVB-T™ will be featured at the International Broadcasting Convention (IBC) in Amsterdam, September 12-16, at Stand 3.A48.

VGA2DVB-T

VGA2DVB-T is a real time converter and MPEG-2 encoder. It converts any VGA graphics and text from a computer to a frequency agile digital DVB-T modulated signal, then sends the signal to multiple HD monitors. VGA2DVB-T can be used with existing analog or digital CCTV systems and inexpensive coaxial cable.

DVB-T (Digital Video Broadcasting – Terrestrial) is the European standard for broadcasting digital TV “over the air”. VGA (Video Graphics Array) is the display standard for personal computers.

“Our European customers are extremely enthusiastic about the VGA2DVB-T,” said Laszlo Zoltan, Sales Manager for DVEO. “It’s an ideal way to display the same information on many televisions in public places -- such as stadiums, schools, airports, manufacturing plants, and hotels.”

The system is easy to configure, and it includes a set of templates to ensure that content will be displayed correctly.

DVEO will soon be introducing VGA converters in other formats -- including VGA2QAM™, VGA2IP™, VGA2ASI™, and VGAto8VSB™.

Supplemental Information for Press Release

Features

VGA

- Input: VGA 1280 x720 full screen or 1280x 1024 with shrunken viewport
- Also works with DVI-I when using adapter
- MPEG-2 encoding bit rates supported: 15 to 35 Mbps
- Based on Windows®, embedded

DVB-T

- Frequency agile, channels 2-135
- Output Resolution: 720p at 16x9
- Able to be mixed with analog channels with passive mixing via inexpensive RF mixer

Suggested Retail Price:

VGA2DVB-T – \$10,995 U.S.
