Overview

Inexpensive high volume hardware platforms combined with highly enhanced open source Linux® based software offer great value to all willing to embrace the future. Furthermore, Intel’s architecture is highly tuned to encoding and transcoding tasks. We offer high quality and high reliability transcoding solutions that are based on open source libraries. We enhance the libraries by rewriting critical sections to obtain outstanding reliability and throughput.

The Brutus™ I IP/IP: TELCO is a highly affordable Intel® Xeon® processor based multi channel IP to IP groomer and transcoder designed for capturing IP content and streaming appropriately groomed content to iPads, iPhones, content delivery networks, and remote video devices. It can also multiplex the streams if required.

The Brutus I IP/IP: TELCO is designed to be an affordable platform to ingest video from multiple IP transport streams, transcode the MPEG-2 to the H.264 or optional H.265 standard, and provide ample choices for resolutions, protocols, wrappers, and containers. This is easy to do since quality and reliability are built into the Linux® environment.

This unit is designed to be affordable, scalable, and extendable. Modifications to video formats and features are easily created. Remote management is via a web GUI and multi level security is newly built in.

Applications

- Transcode SPTS or MPTS from MPEG-2 to H.264 or optional H.265
- Transcode from H.264 to MPEG-2
- Adding new protocols and wrappers (HLS, RTMP) to transport streams
- Audio transcoding from AC-3 to AAC, MPEG-1 Layer II to AAC, AAC to AC-3
