Applications

- Axis IP camera decoder for On Air use

Overview

Streaming video via RTSP or RTMP is the most efficient methodology for delivering SD and HD content from IP cameras over the public internet. IP cameras don't always bring back broadcast quality frame rates inasmuch as they are geared towards low cost applications. Broadcast platforms are more stringent in that they expect 30 fps with a constant bit rate.

Thanks to some unique algorithms the **D-Streamer IP/DIG Axis Weather Cam** can deliver a professional quality decoding experience for broadcasters who wish to put their IP camera outputs on the air.

This embedded Linux® based unit is designed to be affordable, scalable, and extendable. Modifications to video formats are easily created. Remote management and multi level security is built in.
