**Overview**

Inexpensive high volume hardware platforms combined with highly enhanced open source Linux® based software offer great value to all willing to embrace the future. Furthermore, Intel’s architecture is highly tuned to encoding and transcoding tasks. We offer high performance streaming solutions that are based on open source libraries. We enhance the libraries by rewriting critical sections to obtain outstanding reliability and throughput.

The LynnBox 8VSB/IP is a highly affordable dual core based multi channel RF to IP gateway and H.264 encoder and transcoder designed for capturing 8VSB content and streaming this content to iPads, iPhones, content delivery networks, and remote video capture devices.

The LynnBox 8VSB/IP is designed to be an affordable platform to ingest video from terrestrial broadcast stations, transcode the MPEG-2 to the H.264 standard (or optional H.265), and provide for choices for resolutions, protocols, wrappers, and containers. This is easy to do since we are using Linux® and these outputs are well supported by the Linux® environment.

This unit is designed to be affordable, scalable, and extendable. Modifications to video formats are easily created. Remote management and multi level security is built in.

**Applications**

- Backhaul/Monitoring for Broadcasters
