Streaming professionals need quality ease of use and support.

Real time, highly reliable, 1 RU, quick starting, standards compliant, embedded Linux® based, remotely manageable, single channel SD or HD (SDI), H.264/AVC or optional H.265 TS Encoder. Incorporates a "minimal" Linux® kernel (residing on an SSD) yielding a professional encoder manageable from anywhere via web GUI.

Supports most industry standard "protocols" like UDP or RTP with unicast or multicast, and “Wrappers” such as HLS, RTMP, etc. Audio output is AAC, MPEG-1 Layer II, optional MP3, and/or optional “SurCode for Dolby Digital” AC-3. Supports closed captioning and teletext with overlay.

Encodes streams with multiple resolutions at .1 to 15 Mbps at popular GOP sizes, frame rates, refresh rates, or aspect ratios. Simultaneously creates high, medium, and low bitrate ABR streams to hand off to your content delivery networks (CDNs) with required authentication, for "One to Many" distribution. Software is scanned for vulnerabilities and open ports. Supports 50 simultaneous HLS users. With optional Atlas™ add-on, supports 1,000 RTMP, DASH, and/or HLS users natively.

Overview

The MultiStreamer™ is a family member of our flagship cost effective origin encoders. This family has been in production for five years and we have shipped over 2,500 units. It is designed as a general purpose workhorse, able to stream several simultaneous streams at different resolutions with any streaming protocols.

Inexpensive high volume hardware platforms combined with highly enhanced open source Linux® based software offer great value to all willing to embrace the future. We offer high performance streaming solutions that are based on open source libraries. We enhance the libraries by rewriting critical sections to obtain outstanding reliability and throughput.

This unit is designed to be affordable, scalable, and extendable. Modifications to video formats are easily created. Remote management and multi level security is built in.
