

## About

DVEO is a leading worldwide provider of Video Transport Equipment to Telcos and Broadcasters. We have been here for over 30 years. We tend to re-invent ourselves every 10 years or so. This is akin to the product life cycle of many technologies.

DVEO started out building "process control" equipment in the 80's until the IBM PC took over the market. In the 90's DVEO created data communications products for the IBM PC. This was great until Cisco came along and rapidly took over the data communications market between 1992 to 2000.

This brought us to the Broadcast Hardware market in 2001 by pioneering with DVB-ASI. In 2007 we re-focused on video over IP and have emerged as a pioneer in many areas.

DVEO® has built an International reputation for delivering cost effective solutions for TELCO's, Broadcasters, and the Cable Industry. We sell products to every part of the world and our customers can interface with us directly or via our Distributors. About 40% of our products are shipped outside the USA.

We provide extremely high quality products at a very reasonable price. We are very open to customizing our products to suit you... We are always looking for new product concepts that can be implemented by our engineering teams. All products now come with a 13 months warranty. Our encoder and transcoder software is based on X.264 which has been ranked as the number 1 software transcoder engine for QUALITY. Many products are designed with redundancy in mind. We offer 24x7 support programs.

We work with every customer and pay attention to their unique needs. We are truly obsessed with satisfying each and every customer. Call us if we do not satisfy you and we will always correct the situation.
