DVEO Announces the release of EZ PROBE™: RF, IP, or ASI

San Diego, California -- DVEO[®], a leading TV/OTT equipment supplier, announces a new video transport monitoring system called the EZ PROBE™. This product is a completely freestanding unit, sophisticated stream or RF analysis with its own CPU and can perform without the need for any external host system.

EZ PROBE™ is a very intelligent device that could be deployed in all major segments of an MSO's network. The reports provided should be aggregated to a major trends data set that can be used continuously and should be rapidly repurposed for snooping out possible outages. Typically it reports back to the head end. DVEO's EZ PROBE™ is a small affordable, multifunction probe with high end instrument features.

"This product is going to improve confidence in the signal integrity of long haul fiber circuits used to send video for special events, such as the Olympics. It is able to monitor the signals and provide an accurate reading which is then relayed to an iphone or laptop. This device is also able to resend alerts to anyone. As a result operators will increase the quality of video to the viewers without any delays or interruptions," stated Laszlo Zoltan, CEO, DVEO.

The major system operators (MSO's) who deploy OTT and IPTV and manage huge hybrid networks where RF, IP and ASI are ever-present in faraway production islands. The only way to maintain these far away "islands" is by instrumenting the inputs and outputs as much as possible. DVEO'S PROBE is a small, affordable, multifunction probe with high end instrument features. Above and beyond ETR 290 analysis the EZ PROBE supports H.264, H.265, 4K, J2K, AAC, PCM, Audio, SCTE 35 signaling.

The EZ PROBE™ is inexpensive enough so that we foresee using it at both ingress and egress points of all circuits. This deployment methodology makes trouble shooting much easier.

"There are so many benefits to the EZ PROBE™ it is affordable and compact and it also has Wi-Fi built into which makes it a "one stop shop", stated Laszlo Zoltan, CEO, DVEO.

About DVEO®

DVEO is a well established, privately held entity headquartered in San Diego, California, since 2001. DVEO develops and sells broadcast quality video encoding and streaming products, media servers and ad insertion solutions to leading Telco TV/OTT and cable operators around the world. The DVEO solutions enable multi-screen service delivery to any device, anytime, anywhere in the world. Deployment models include turnkey installations and cloud-based service delivery. All solutions are built on Linux OS and Intel Xeon-based platforms to ensure 24x7 reliability, and feature DVEO-developed software for maximum flexibility and upgradability, ensuring long term investment protection. These ultra-reliable products are matched by valuable pre-sales consultancy, outstanding post-sales service and support, and -- not least -- unusual affordability.
