Immediate Release

June 15, 2020

DVEO uses COVID "Lull" to reengineer Encoding, Transcoding, Product Line to Standard Linux Platform which accommodate Cloud Technology

San Diego, California -- DVEO®, a leading TV/OTT equipment supplier, is pleased to announce that it has now reengineered its Encoding Transcoding, and Video Server products to accommodate the changing world. The new versions will be rolling out on July 5, 2020.

Beginning in 2007, DVEO was a pioneer in commercializing FF MPEG and VLC by fixing the shortcomings of open source libraries. In order to speed up performance DVEO also chose to create a closed Linux with minimality. This meant that we mainly used the kernel and left out all the fluff. "This resulted in a reliable application that was tested as a "unit". The world has since changed. "Virtualization" and cloudification now relies on standard apps. Furthermore containers, kubernetes, and the availability of Amazon, Microsoft, and Google "clouds" make proprietary Linux no longer cost effective. Over time it became increasingly difficult to justify investing in our proprietary version of Linux," stated Laszlo Zoltan, CEO, DVEO.

About DVEO®

DVEO is a well established, privately held entity headquartered in San Diego, California, since 2001. DVEO develops and sells broadcast quality video encoding and streaming

products, media servers and ad insertion solutions to leading Telco TV/OTT and cable operators around the world. The DVEO solutions enable multi-screen service delivery to any device, anytime, anywhere in the world. Deployment models include turnkey installations and cloud-based service delivery. All solutions are built on Linux OS and Intel Xeon-based platforms to ensure 24x7 reliability, and feature DVEO-developed software for maximum flexibility and upgradability, ensuring long term investment protection. These ultra-reliable products are matched by valuable pre-sales consultancy, outstanding post-sales service and support, and -- not least -- unusual affordability.
