

Traffic Saver™ Packager Platform

So you've figured out that a packager can help you get all those fees you pay to your CDN under control? You need a Traffic Saver! At DVEO we're best known for our encoders -- top quality at not-so-top prices. We've gotten that reputation via quality hardware and innovative software. Our Traffic Saver brings that innovation to Packagers.

- It stores HLS and DASH in a single fMP4 segment file. You only need one segment for both HLS and DASH, all bitrates, all sizes; a single unified source for multiple clients and devices.
- It uniquely provides buffering control via URL params meaning you can provide better fast forward and rewind for live and VOD playback with little effort and economical resource use.
- It does these things (and a lot more) by ingesting your original HLS and packaging the output as per your requirements. So you place it at your edge -- directly in front of your viewers, or in front of your CDN.

Call +1 858-613-1818, email us at sales@dveo.com, or visit www.DVEO.com to find out about the savings that Traffic Saver can package for you.
